EDUCATION

Carnegie Mellon University, Pittsburgh, PA *Sep. 2022 - May 2024*

- Master of Entertainment Technology

University of Michigan, Ann Arbor, MI *Jan. 2019 - Apr. 2021*

- Bachelor of Science in Computer Science Engineering
- Minor in Mathematics

The Pennsylvania State University, University Park, PA *Sep. 2017 - Dec. 2018*

- Major in Mathematics

WORK EXPERIENCE

Alterstaff, Inc. | NY (Remote) | Unity Game Developer *Jan. 2024 - present*

- Led end-to-end development as founding engineer for 3 levels of a Gen-AI narrative game that became one of the best-selling and highest-rated AI-native games on Steam.
- Built reliable client-server communication systems using UnityWebRequest, integrating multiple LLM-driven backend services with dialogue systems while tuning prompts and building short-term memory and point-of-interest systems to improve dialogue quality, behavioral consistency, and gameplay responsiveness.
- Architected 10+ modular mini-games while collaborating with UI/UX designers, artists, and game designers to deliver cohesive gameplay experiences.

Resilience Inc. | FL (Remote) | VR Game Developer *Oct. 2021 - Sept. 2022*

- Implemented Unity 3D VR animation systems and scripted cinematic sequences in C#, creating interactive therapeutic experience designed to help children manage fear, anxiety and emotional self-regulation.
- Refactored and conducted unit tests on animation code using object-oriented programming principles, reducing visible lags during interactive VR sequences.

PROJECT EXPERIENCE

Architoys | CMU | Programmer *Jan.--May. 2023*

- Built an Android AR experience in Unity with C#, Vuforia, and 3D-printed modules, allowing users to interact with miniature virtual characters in themed physical blocks.
- Implemented AR tracking, 3D scene alignment, and NavMesh-based pathfinding for virtual character movement within customized block environments.

Lost in Light | CMU | Programmer *Sept. - Dec. 2023*

- Developed a VR “games for change” experience in Unreal Engine with C++ and Blueprints, simulating bird migration challenges affected by urban light pollution in Pittsburgh.
- Designed and implemented a 3D vector interpolation-based flight control system to deliver intuitive bird movement while constraining player traversal within guided flight paths.
